Scientific and common names. Scientific names. The scientific name of a species is governed by internationally accepted rules that determine what the name is and insure that each species has only one. Thus scientific names are the same in every locality and in every language. Each scientific name of a species is two words (a binomen)—the first is the name of the genus to which the species is assigned, the second is the specific name. Scientific and common names
Scientific names or Binomial Nomenclature is a scientific process wherein entities such as plants, animals, living entities are named and they are derived from Latin. It has many advantages such as:
Classification and organisation - Entities are comprehensively organised which makes understanding and studying characteristics of particular ...
Scientific Names Of The Most Common Animals And Plants
Common names can vary wildly from one area to the next; it is routine for two animals to be called the same name or for one animal to be called many different names. Having only one scientific name eliminates this confusion, as that name will only refer to one taxon at any given time. The Usage and Importance of Scientific Names ...
SciName Finder™ is a search tool for scientific/common (vernacular) names

of plants and animals written by Anders Møller, Danish Food Information.
